

College options

I'm proficient in information literacy and I hope to develop written communication.

Information literacy is useful in a number of situations. When writing research papers, knowing how to find good resources is important. This skill helps me find enough information even for long papers and it ensures that I present accurate information. This eases the difficulty of writing research papers and improves their quality. Information literacy also helps me with programming. Troubleshooting a program can be tedious, and finding the solution online is not straightforward. I use information literacy to narrow down my problem, find the source if it, and then find the solution. Also, if I get lost in a class, this skill can allow me find online resources that can help. When I do undergraduate research or internships, this skill can help me learn more on my topic of study. Information literacy will help me in my college career.

My written communication skills can be improved with practice. Taking a writing class is an important step in improving. I should also try to improve from all writing assignments, not just ones from an English class. Visiting the writing center will help with this. By taking each writing assignment as a learning experience, I can develop this skill.

In my future career, written communication and information literacy will be important. Employers want employees to problem solve, and the internet is an important resource for this. Information literacy will help me navigate the internet to find my answers. Written communication is important in many aspects. It's necessary for getting hired, working a group, and explaining work to others. Both skills are important in the workplace.
